# safe sex

we inform you

but you decide

## Why?

Because you are the most important thing.

Because if you protect your body you preserve your health.

Because if you care you always win.

## Have a safe seX to avoid:

Sexual transmitted diseases as pubic lice, gonorrhoea, syphilis, genital warts, HIV/AIDS, hepatitis...

Unwanted pregnancies.

...think about you...

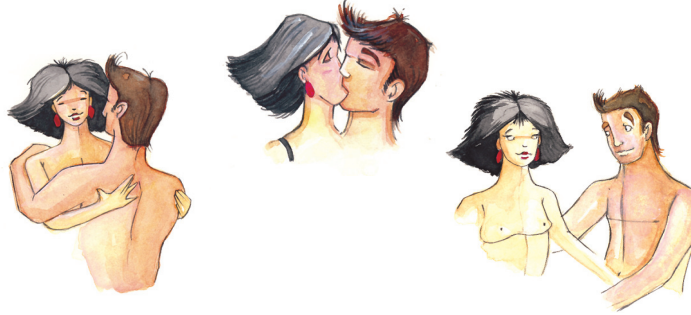

# safe seX

## How?

if you have seX,  
play safe

## ALWAYS WITH A CONDOM

There are many ways of making love without having sexual intercourse and they can be also good and funny, such as masturbation, kissing, embracing, caressing...

## TO PROTECT YOURSELF USE THE CONDOM IN THE RIGHT WAY

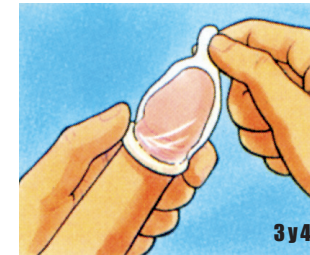

- You must always be the one to put the condom on.
- Use a new condom each time.
- Never use two condoms at the same time.
- You can avoid the break of the condom by adding water based lubrication (not hands cream, body lotion or vaseline).
- There should not be any oral, vaginal or anal contact with the penis until the condom is put on.

...your body is yours...

## CORRECT USE OF CONDOM

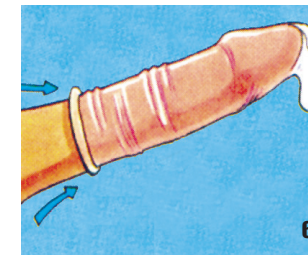

1.

Check the expiry date. Open the condom. Be careful with your teeth, nails or rings in order to not damage it.

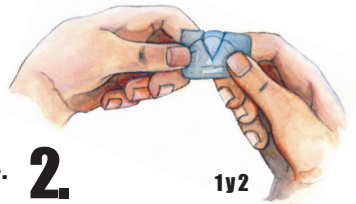

4.

Press the tip of the condom to squeeze the air out of it.

6.

Pull out the condom while the penis is still erect. Throw the used condom in the dustbin, never in the toilet or in the floor.

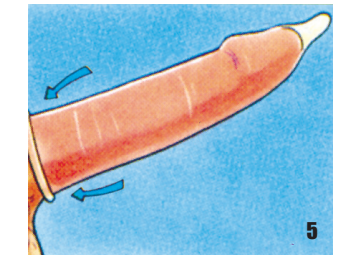

2.

Verify the right position of the condom by slightly blowing through the circle. If you make a mistake while putting the condom, throw it away and use a new one.

3.

Put the condom on before any contact and always when the penis is erect.

5.

Roll the condom down to the end of the erect penis.

...it's in your hands...
